### Abstract

Article presents the author's method of comparative assessment of cities and municipalities level of socio-economic development. It is based on application of a special approach, which allows to combine substantial analysis, quantitative and mathematical-statistical methods using the system of estimative indicators. Method allows obtaining conclusions of the comparative evaluation of the quality of regional socio-economic systems on the basis of solution of mathematical classification problems and includes stages of mathematical-statistical analysis of indicators, partial estimates in the context of the indicators and their blocks, summary assessment and classification/grouping of objects based on this assessment.
